

The Article

Before us there wasn't anything.

This Article is partially written as a story of the one of us.

Since that we all are somewhat alike, that story concerns all of us and it begins on the next page.

Like all of us I happened.

I just happened.

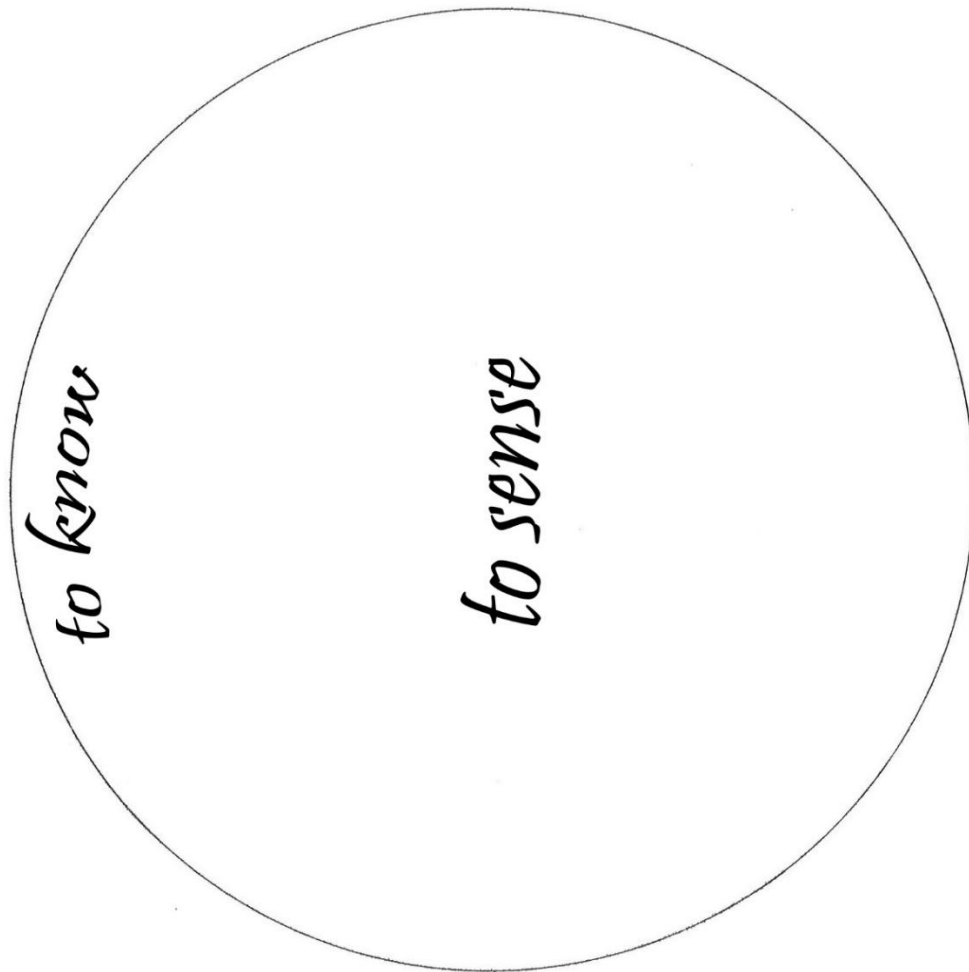

*When I happen, I'm perfectly transparent, not heavy at all and perfectly
penetrable.*

to sense

Then I start to sense, I awake.

When people start to sense, they often say that they get "sensitive".

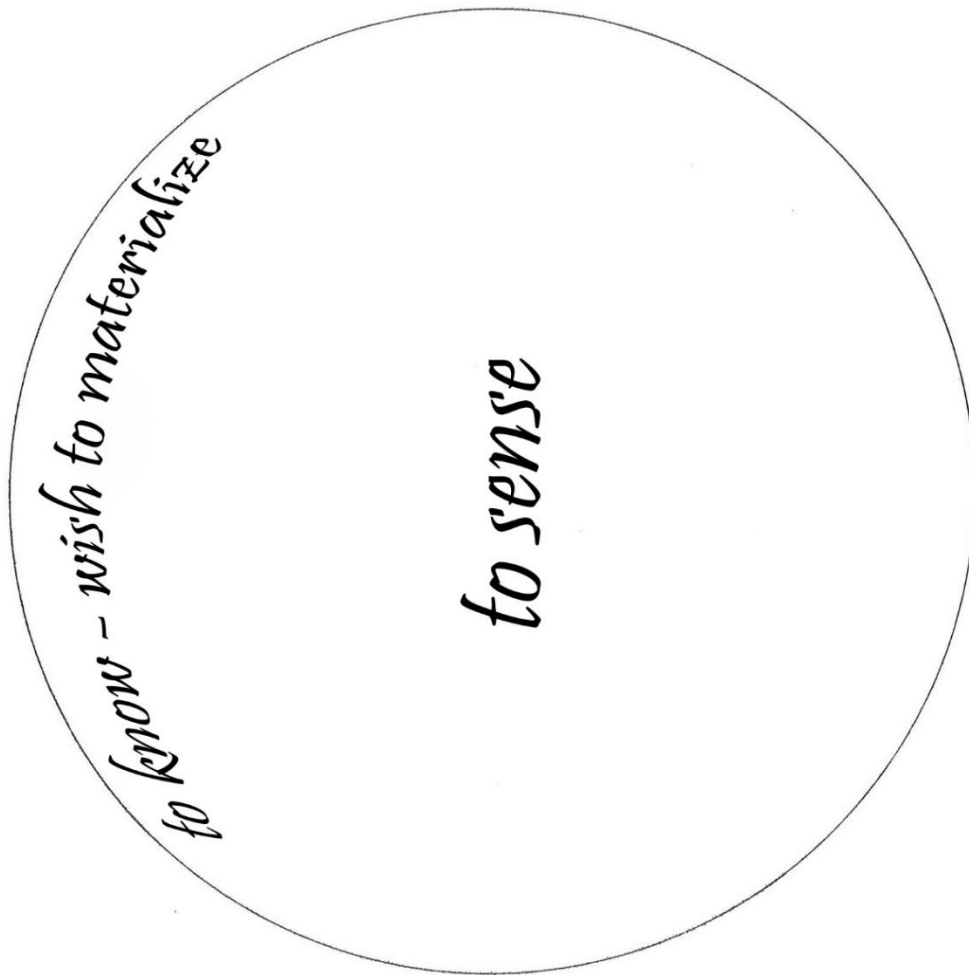

However, when start to sense they not get "sensitive" (bogus "quality"), but just I and anyone else start to sense.

Then I start to know.

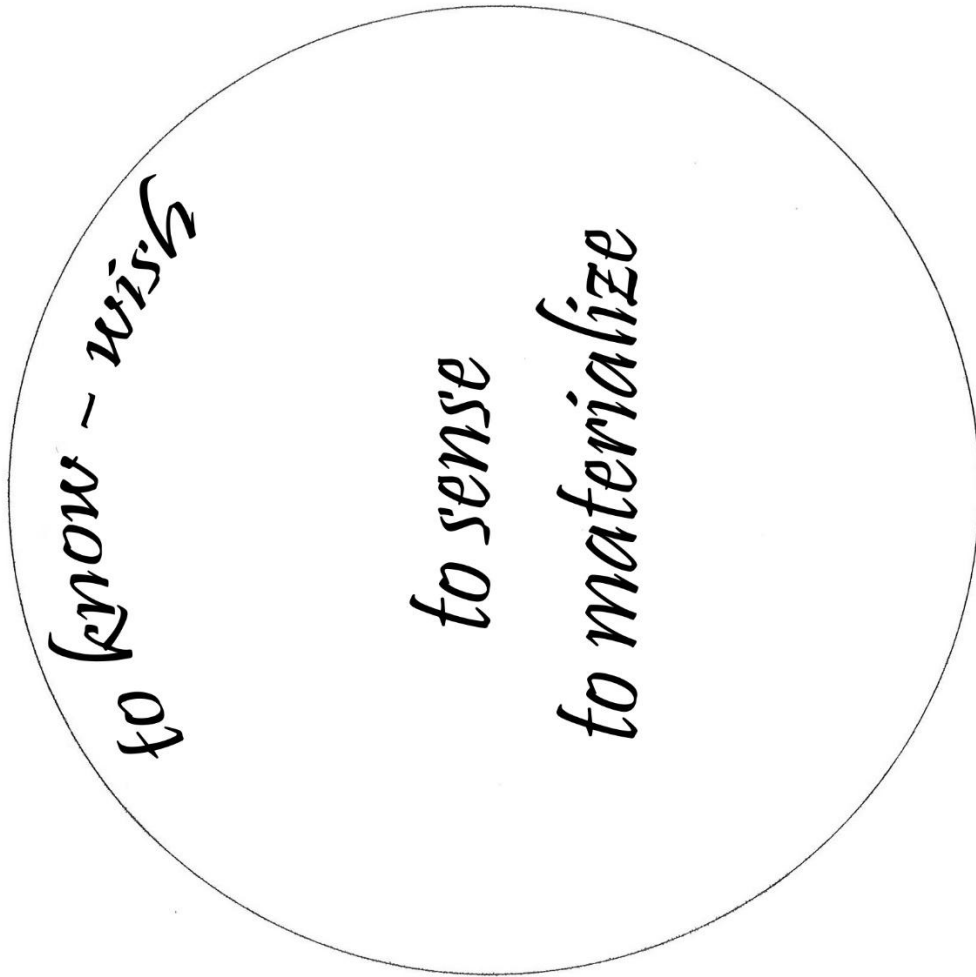

When people start to know, they say that they get "conscious".

*However, when start to know they not get "conscious" (bogus "quality"),
but just like I and anyone else start to know.*

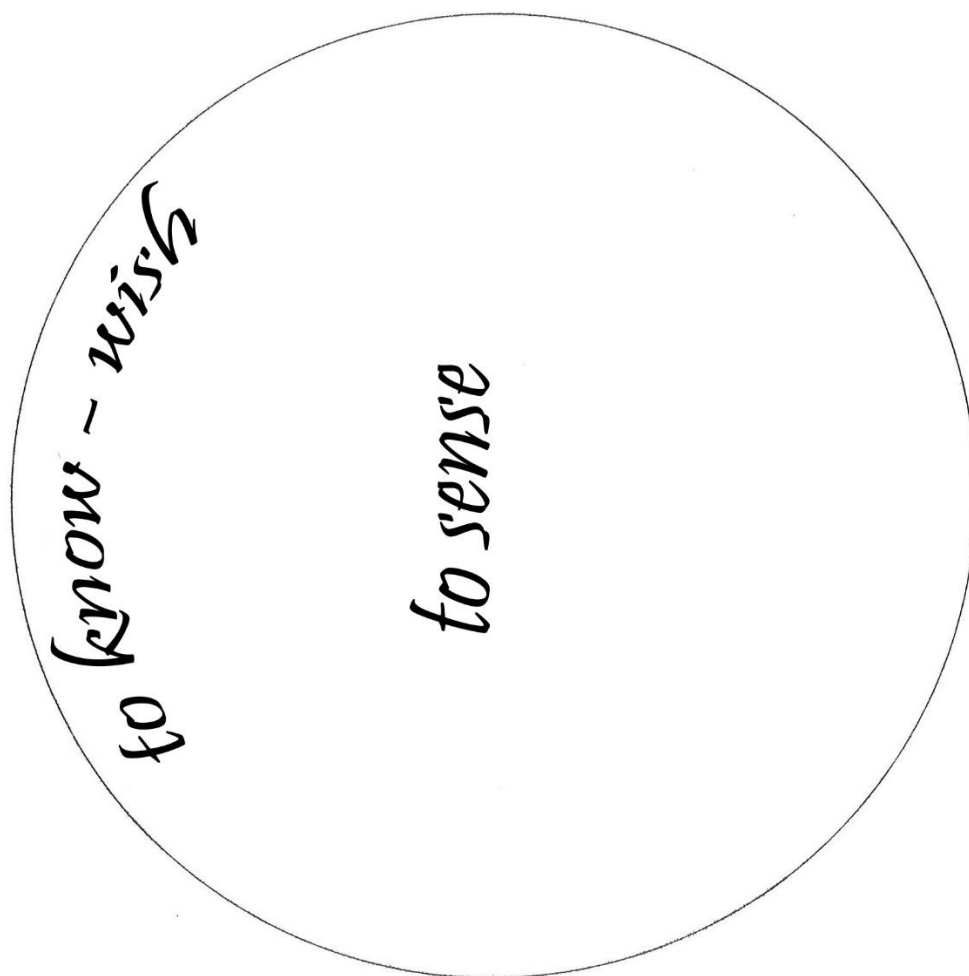

Then I start to wish.

I wish to materialize.

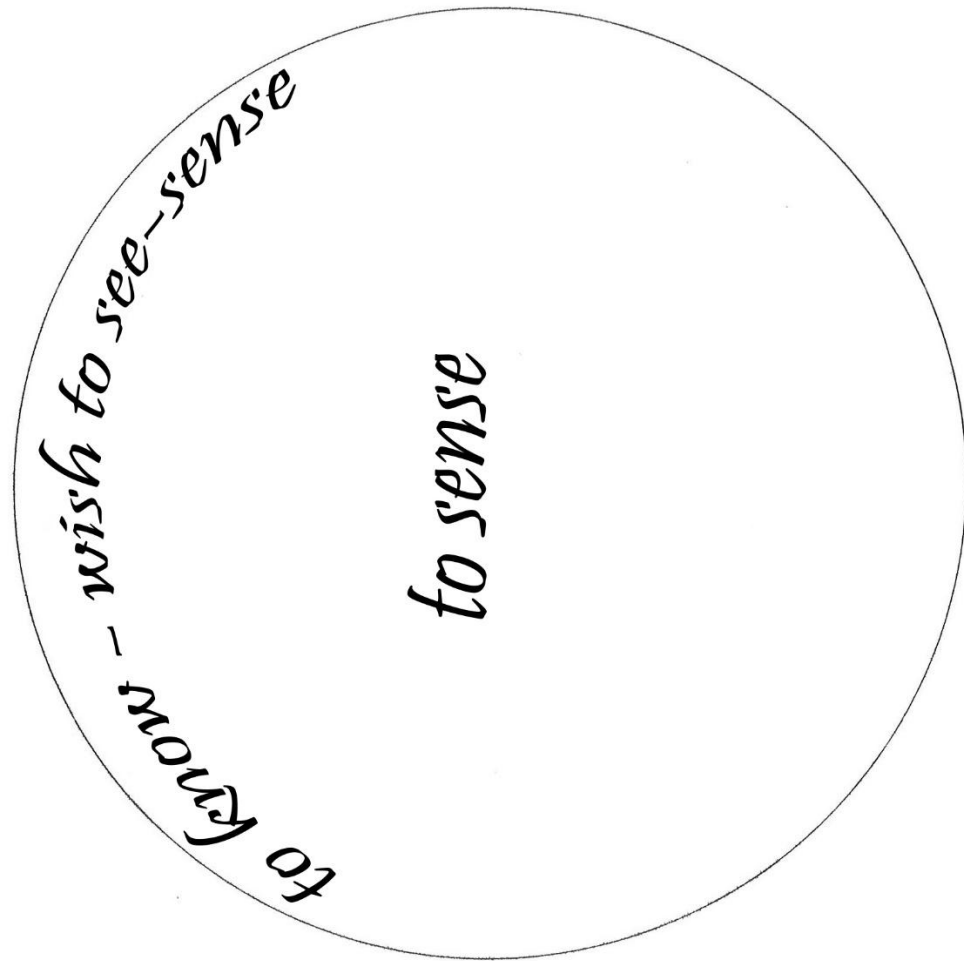

I'm doing so.

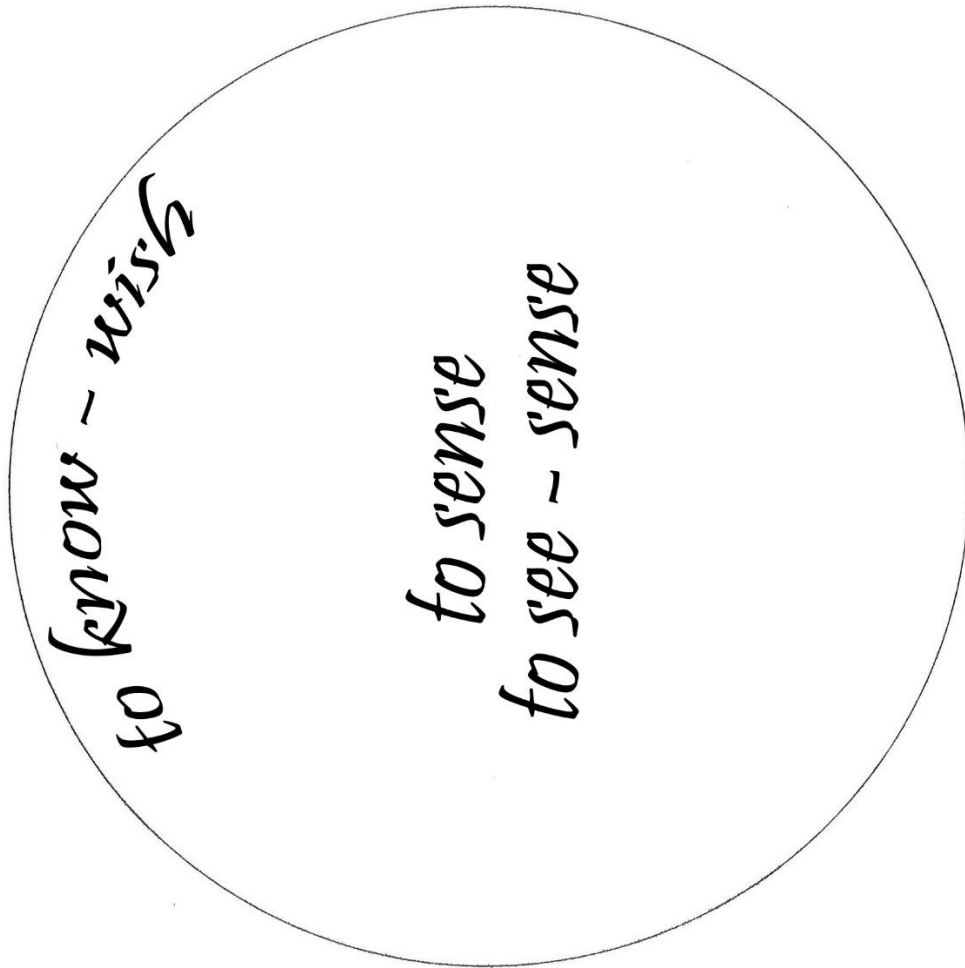

I did so.

I materialized.

*I'm glass-transparent, heavy and impenetrable now (I get (becomed)
glass-transparent, heavy and impenetrable).*

I wish to see - sense.

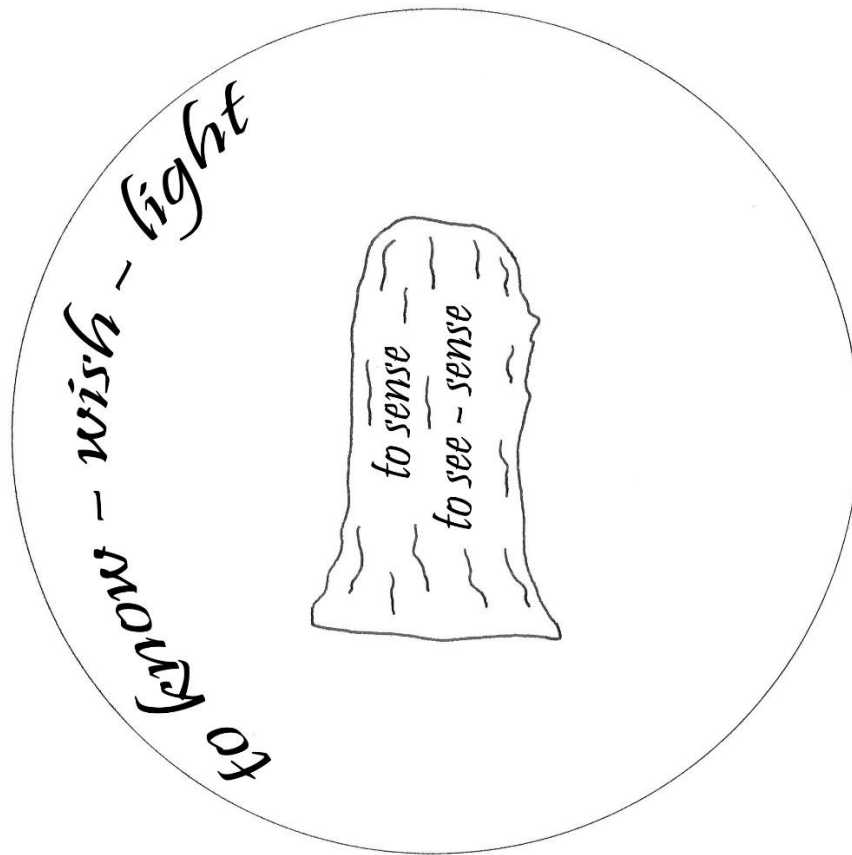

I'm doing so.

I see - sense now.

I wish to light.

When I'm lightening I'm not glass-transparent, but white and lustrous.

I'm lightening.

You can see - sense me.

Let me to introduce myself with a name you call me: I'm PHOTON.

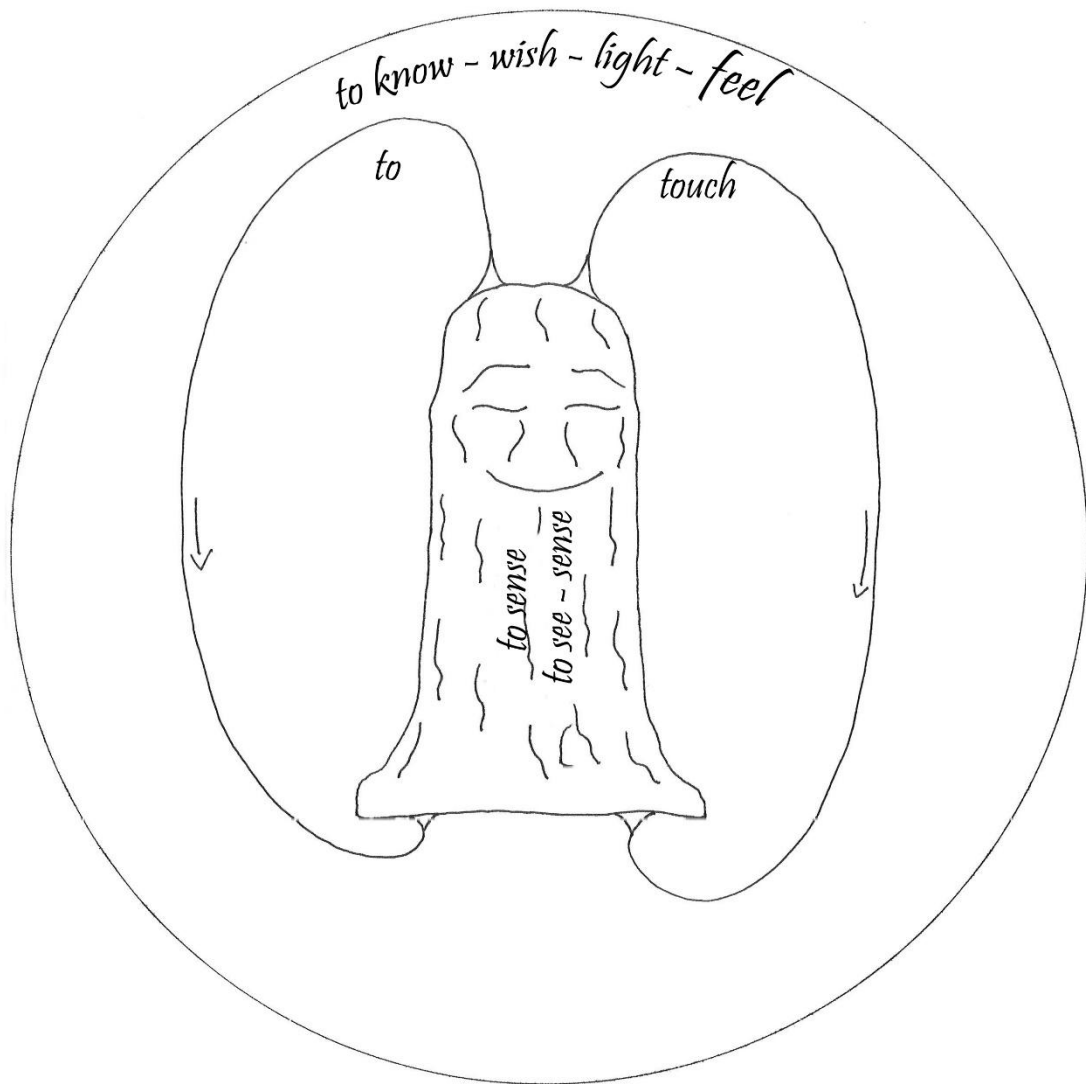

But I will prefer if you call me a BEING.

I feel happily because I can see - sense (through) to light.

I wish to touch me.

I'm doing so.

I wish to move.

I do move now.

But I will stay steady ...

Until I decide where I will go.

I'm doing so.

I decided.

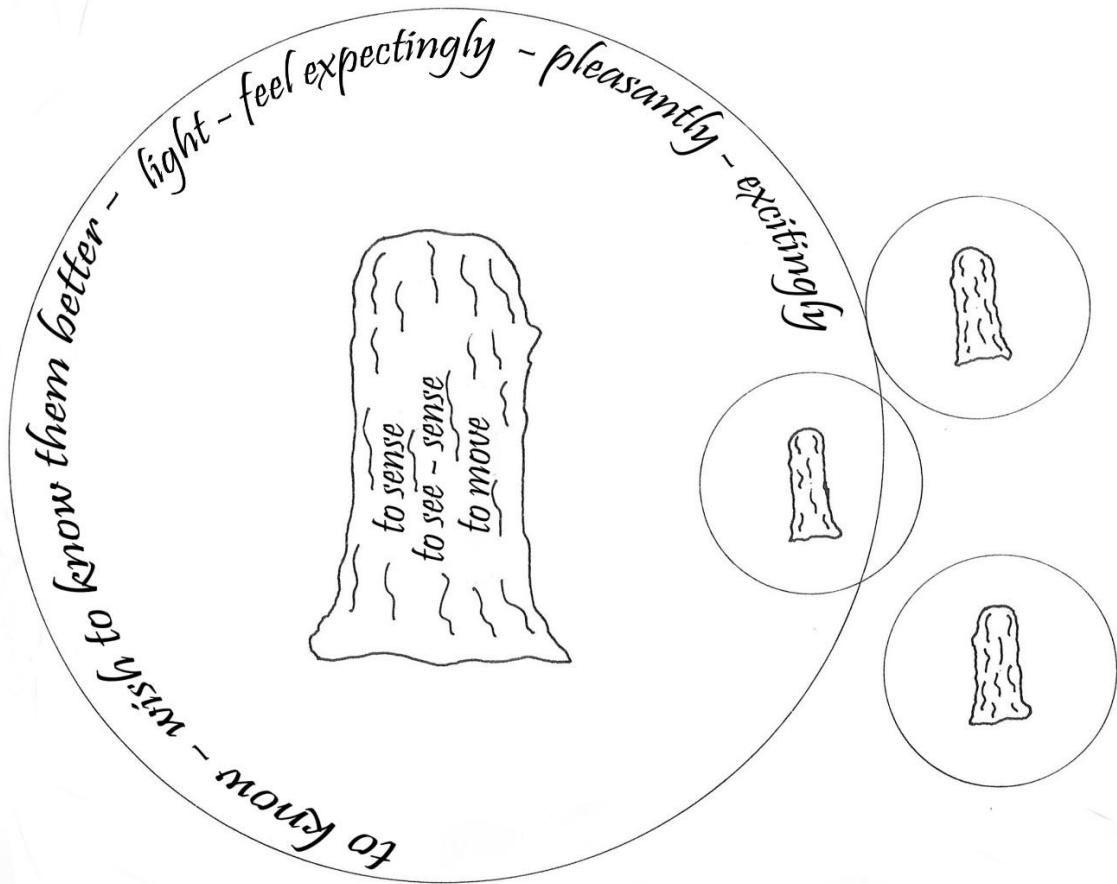

So nice to move.

*I don't have to decide before moving, but this was "one of those situations"
(there were no others around to attract me).*

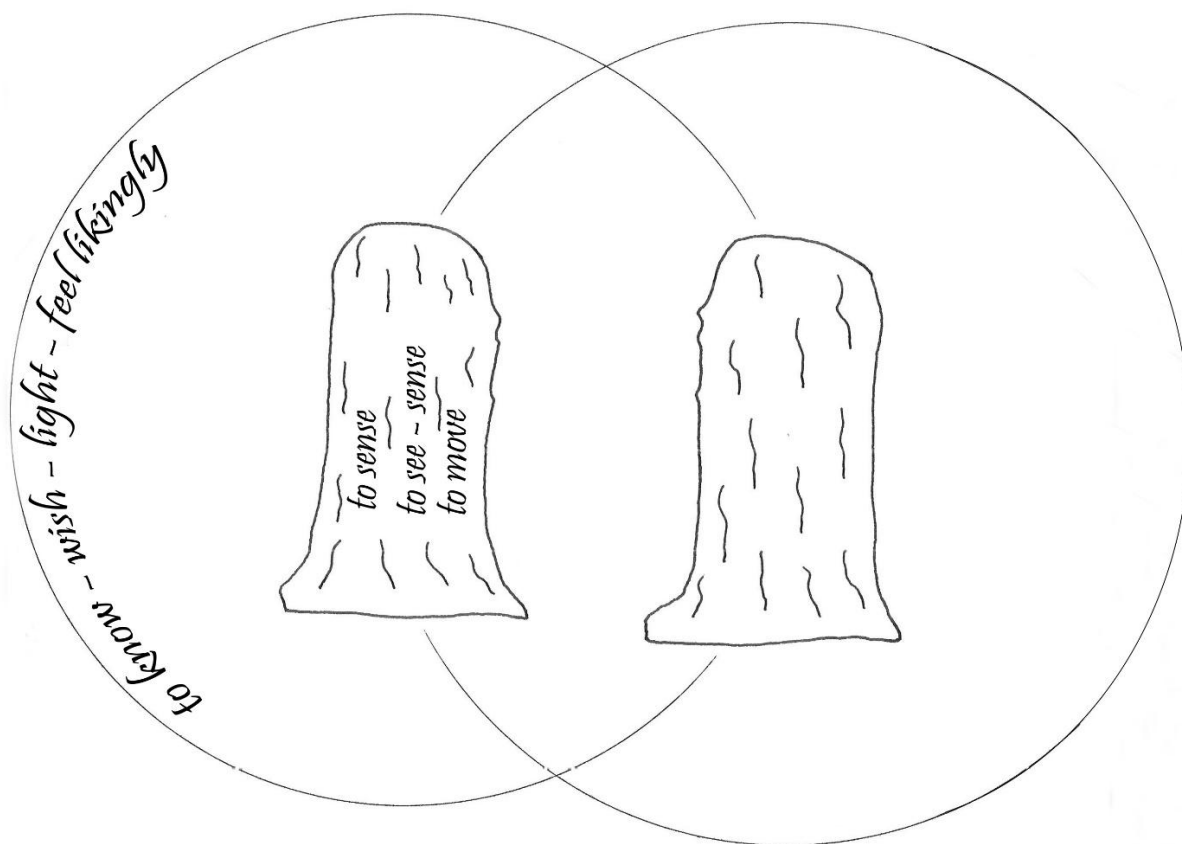

I wish to find others.

I expect to find them.

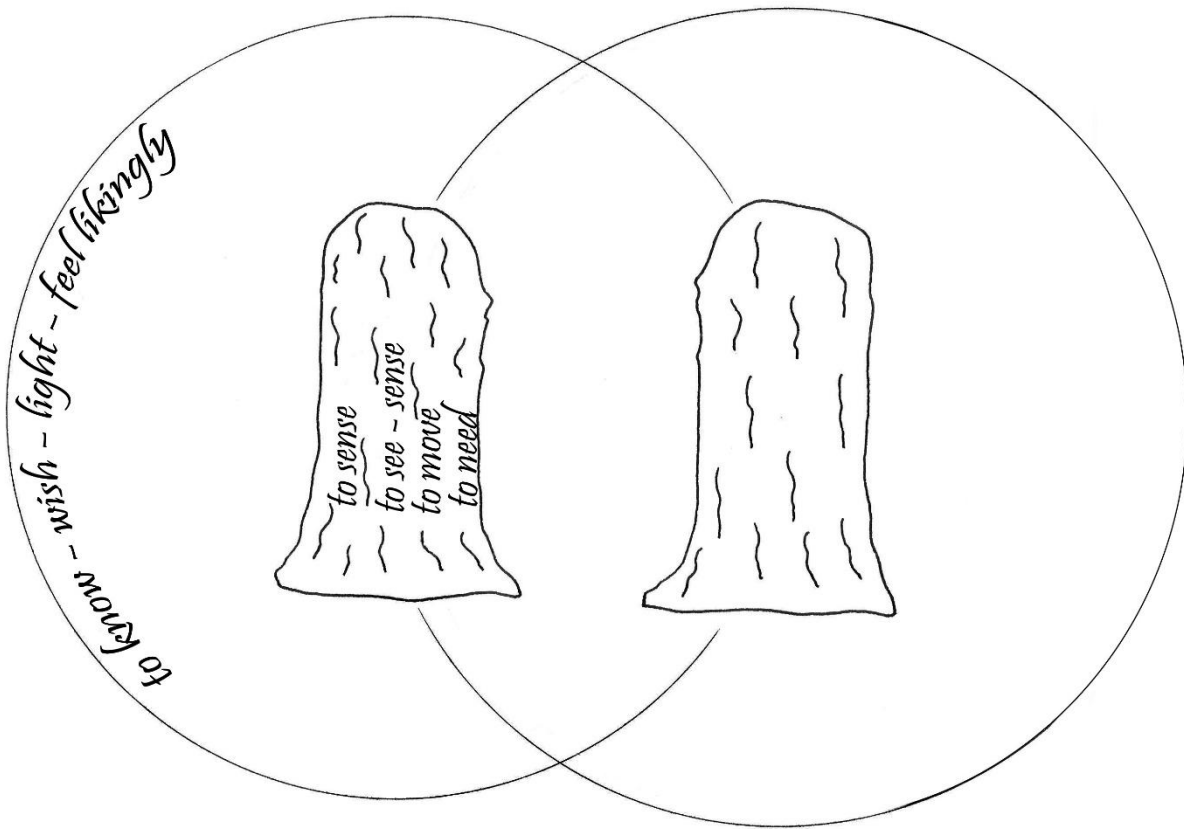

I find them.

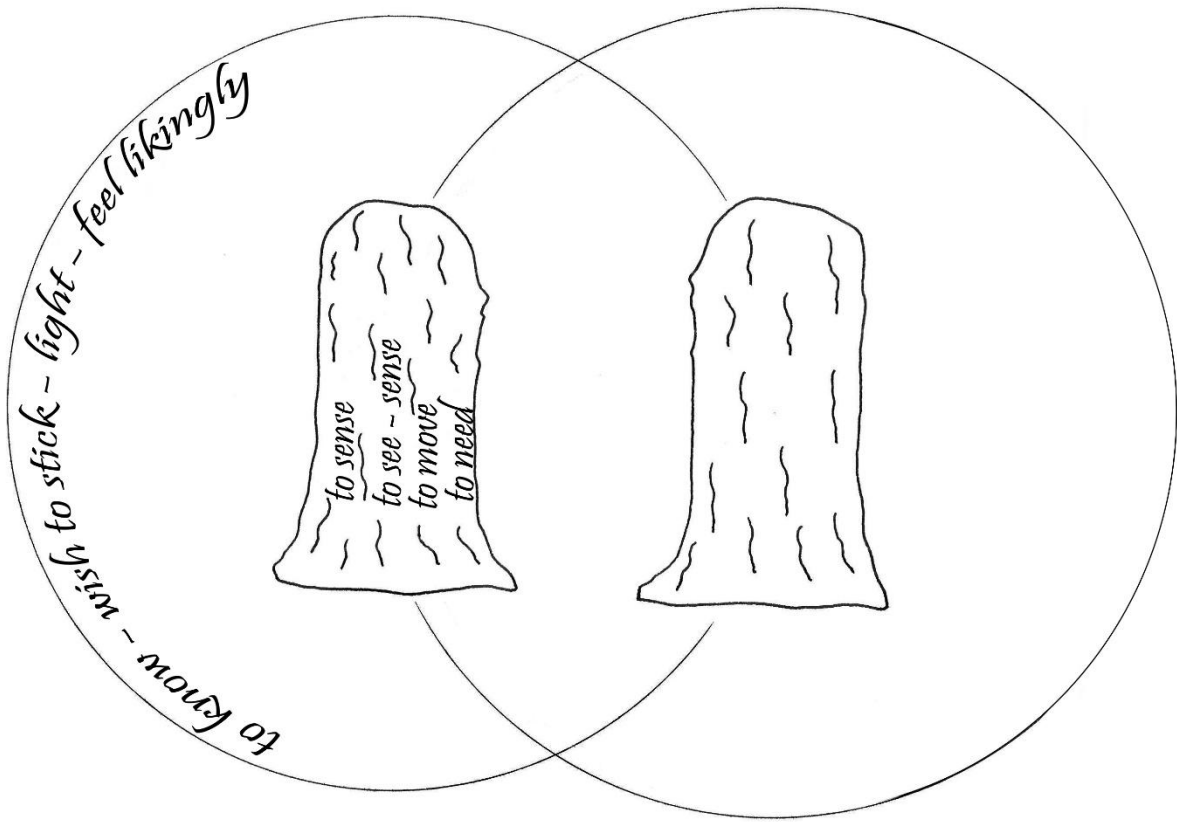

I wish to know them better.

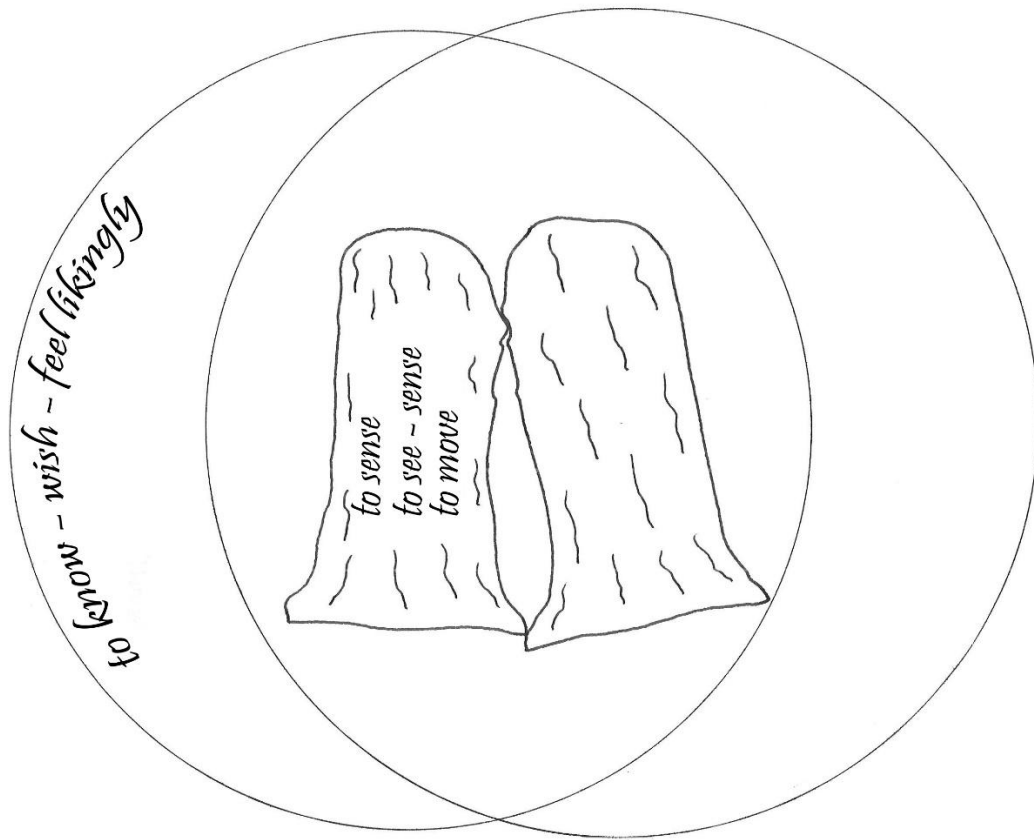

I like this one. And it likes me.

We start to need each other.

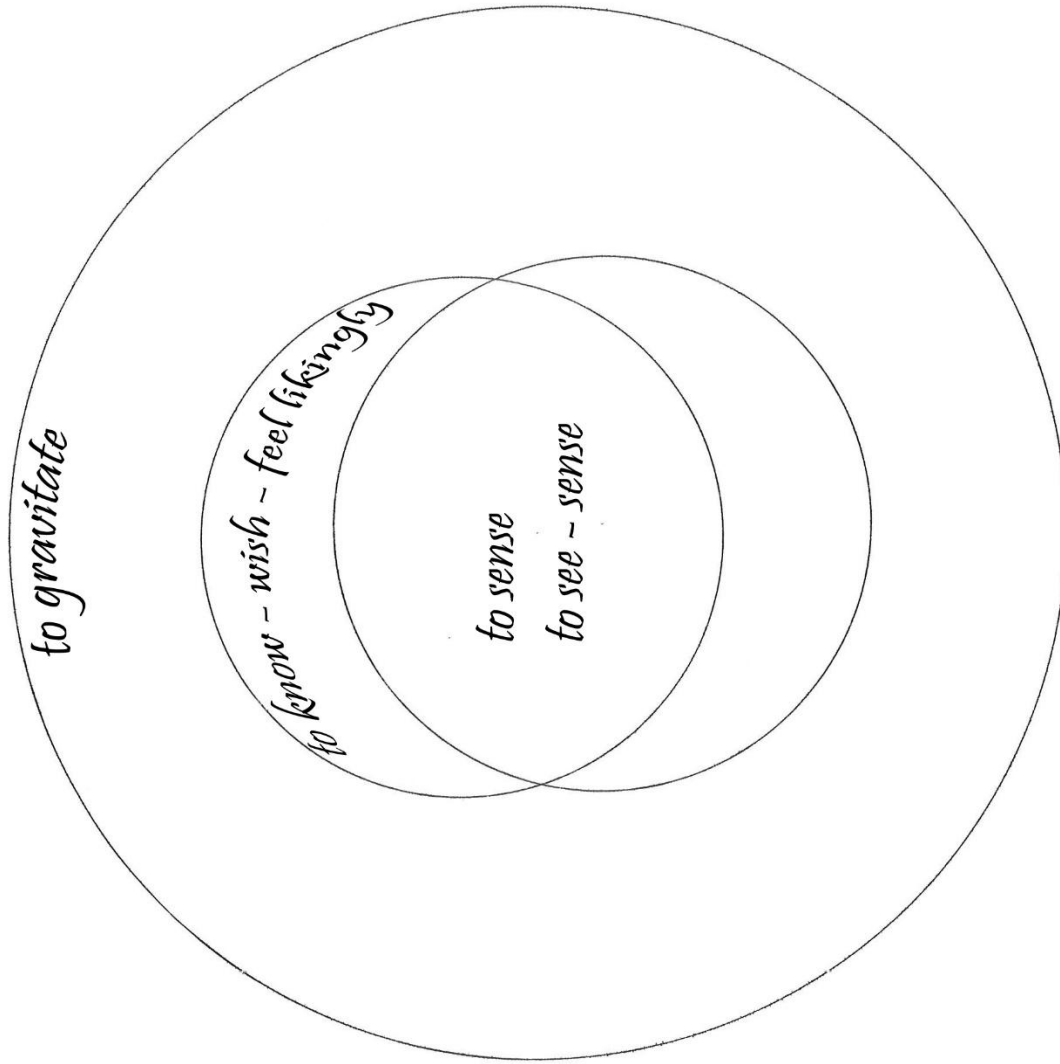

We wish to stick,

We stick.

Before we stick, we stop to light, but for the purpose of this article you can still see - sense us.

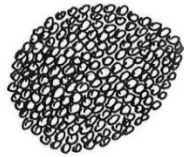

After sticked, photon – beings stop to move and start to gravitate to keep themselves sticked fairly firmly.

They unite theirs to gravitas in one act.

Soon they asleep continuing only to gravitate.

Sooner or later other photon – beings stick with them without awakening them.

And slowly and gradually, they pile up as a

piles

of a various sizes.

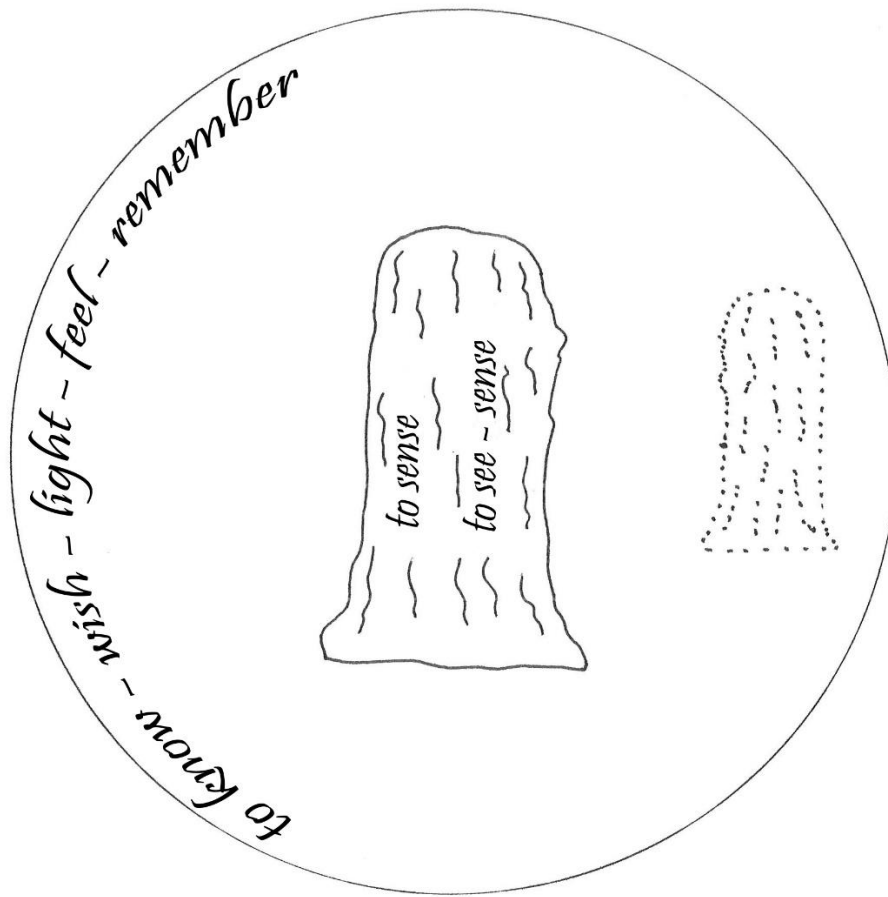

Some of those piles are stable and gravitationally interconnect in to the atoms.

That only two photon – beings start a pile is infrequent.

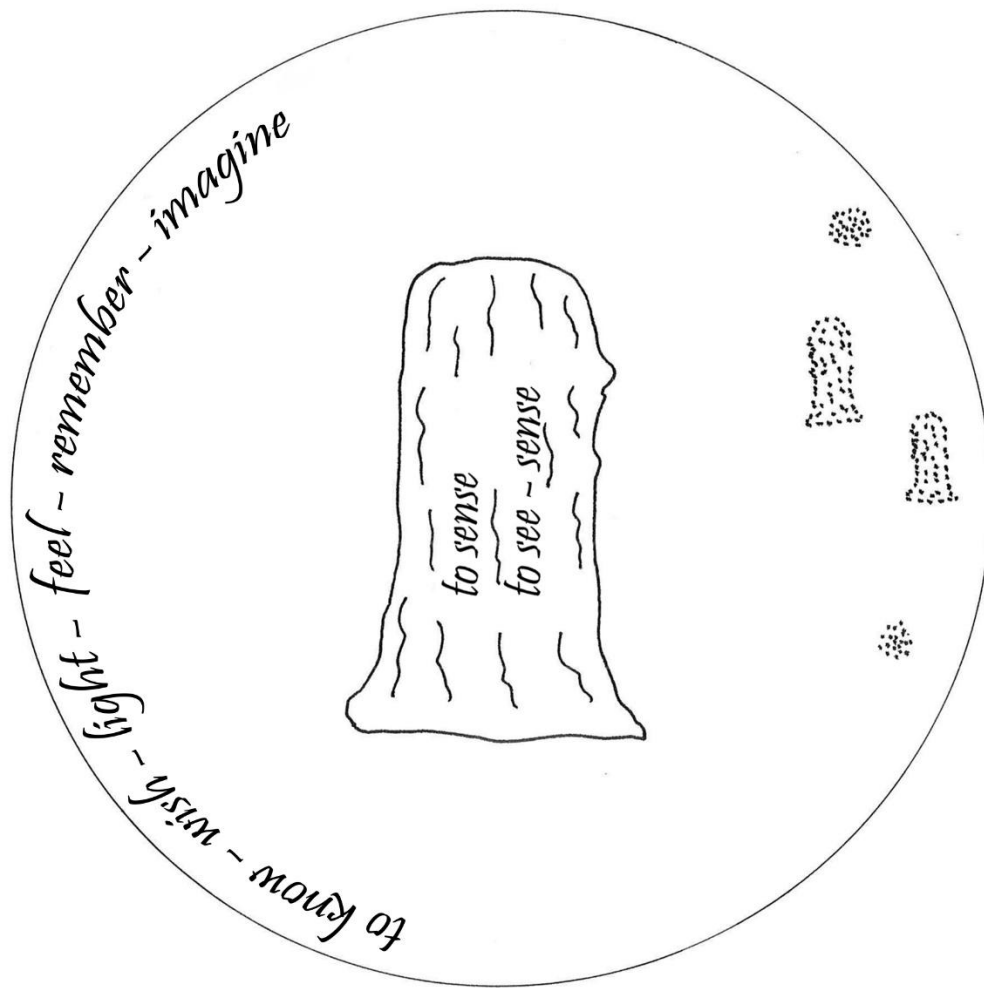

Piles are usually started by more than a two photon – beings.

And when I go away from the beings I stuck with ...

I will occasionally remember some of them.

And I will imagine - think about new beings I will meet.

Like any other photon – being I'm able on 14 ways I can:

sense

know

wish

materialize

see – sense

light

feel

touch me (emanate to touch doing)

move

decide

need

gravitate

remember

imagine

Not spreaded doing:

to sense

to materialize

to see–sense

to move

to decide

to need

Emanated doings

and

belonging doings

to know

to wish

specific wishing

to light

to feel

specific feeling

to touch

to gravitate

to remember

specific remembering

to imagine

specific imagination

Wish, feel, remember and imagine are consisting of two separate doings: emanated "membrane" and specific wishing, feeling, remembering and imagining done within the borders of the belonging "membrane".

"Membranes" are done instantly at their full extension (not inflated) and when stopped to be done they just vanish (not deflated).

"Membranes" do not overlap, cut or touch.

Edge of to light doing also not overlap, touch or cut with "membranes", but inside of to light doing overlap a few "membranes".

With to touch doing photon-being can only push its bottom (as shown on the page 14), not its top. But, by pushing its bottom consequently pushes its top too, because relying cups on is top are resisting.

To touch doing doesn't stream, it's steady, arrows on the page 14 only showing the direction of the pushing.

Beings which are lightening, enlightened beings and to light doings are mirroring on the other being surfaces.

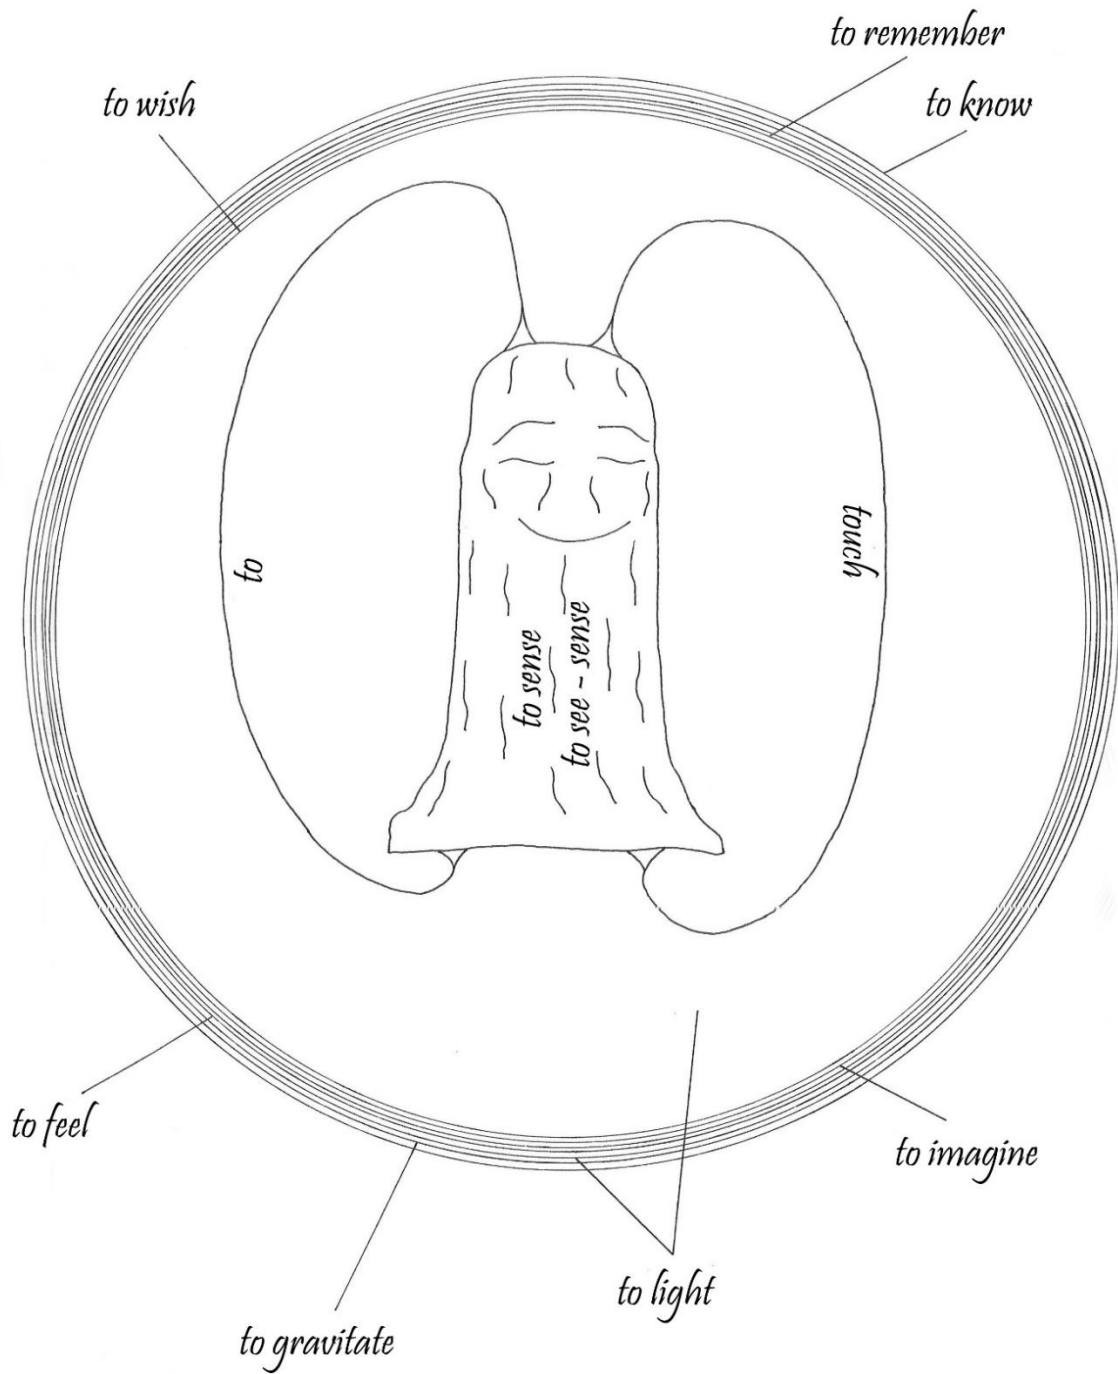

To sense this mirroring is to see - sense.

When photon-beings start to gravitate they can lean (incline) only to theirs front (face) side.

If single photon-being starts to gravitate it will swirl around because of the "lack of resistance".

"Balanced resistance" requires at least three photon-beings.

On the next page you can see the extensiveness of the "membranes" which "goes" for all the beings.

You can see the enlarged mirrorings of the single photon-beings which are lightening.

When you look toward the window or in direction of the sun, but below or aside of it, you can see the enlarged mirrorings of the photon-beings which are lightening as an white sticks surrounded by a transparent no-colored "bubbles", which are moving slowly through the air.

This mirrorings are enlarged by the air-piles and projected on the other air -piles.

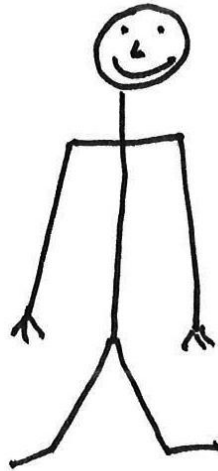

This mirrorings are moving slowly because air-piles are moving slowly (if wind is blowing you will not see this mirrorings).

When photon-beings pass the piles on which they mirrored, the mirroring stays on those piles for a while.

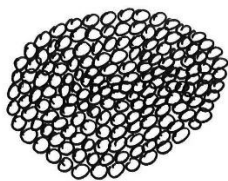

What happens with being which lives when it dies?

Explanation on the example of the man

Man – macro level

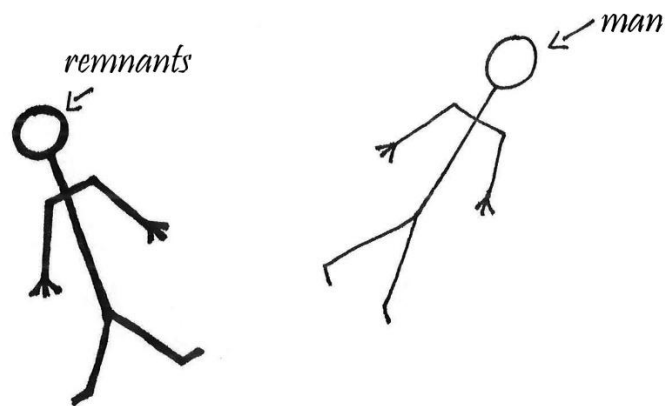

Man – micro level

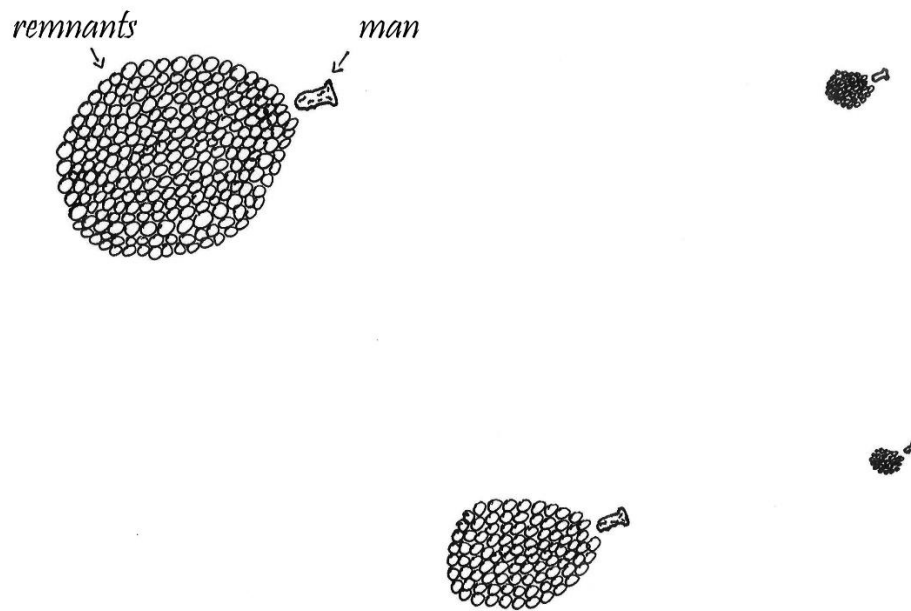

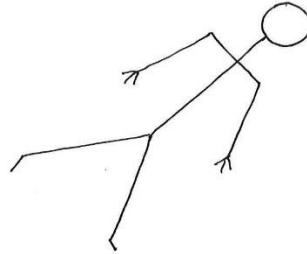

When man dies he is leaving his remnants.

Man - macro level

Man - micro level

Where is man going? To a paradise (upper world).

When he will arrive there? After 15 - 20 "seconds". That much will take him to cross about 20.000.000.000. "years of light".

Is he going through a tunnel? No, but he is going too fast to see anything.

All beings which live are moving so fast toward the upper world when they die.

When beings which live are in this status they shouldn't be called "astral bodies" or "ghosts".

They should be called migrators.

Man can be injured, crippled, burned, whatever, only as a pile man.

Photonic man is indestructible.

For example, man who "lost" his leg stil have his photonic leg.

When such man arrives to paradise photon-beings quickly pile up with him, just as with any other being which live.

Then he is again in his ordinary (non - migratory) status and he have again his "missing" leg.

Background echo

A "3K background radiation is coming from all directions and it is leftover from a big bang".

There wasn't any "big bang".

"Background echo radiation" are the newhappened photon-beings.

Photon-beings are happening continuously (all the "time") fairly (not strictly) even-spreadable, at somewhat fluctuating (not strict) rate.

Soon after they happened, they start to move (in all directions).

So they come from and go in all directions.

So they cauce a "3K background radiation".

Forces and energies

No "forces", no "energies".

Such events (gravitaton, light, flashing (blitz), electromagnetic fields) are manifested by the beings and last as long as being are manifested (doing) on such ways.

Mirrorings

Beings which light, enlightened other beings and to light doing are mirroring on the other being surface.

And that happens INSTANTLY.

For example, if one photon-being is 1.000.000.000 "years of light" away from the other, when it starts to light he and his to light doing will INSTANTLY mirror on the other being surface.

Because of the distance that mirroring will be in the "infinitesimal range of size".

However, some "time" is needed that mirroring gets its full intensity.

Also, when photon-being stop to light, its mirroring will remain on the other being surface for a while (will fade gradually).

Speed of light

"Speed" no, "light" no.

Beings yes and they can move very, very fast. Beings which live when they are in a status of migration, photon-beings always.

Neutrinos

On the plates of screens of the instruments a passing photon-being which are lightening leave trace in a form of a white mirroring (white streap). This mirroring is misunderstood as an "energy".

Faster the photon-being moves, weaken the mirroring is (less and less "time" for a proper mirroring).

So accelerating photon-being "becomes" a "neutrino" and is moving faster and faster as his "energy" is lower.

Space and time

There is no "space" and there is no "time".

The very fact that there is no "space" allowed beings. And so beings are.

And from the very fact that they are, that they last, some beings derive the impression of the "time".

Matter and antimatter

No "matter", no "antimatter".

Bodies and souls

No "bodies", no "souls".

Beings are all there is.

World is coexistential poliocentric principle which consists of the coexisting interactive poliocentres which can be primary (photons) and secondary (beings which live – cerogenits).
